Marble Look

Natural marble with different stains and patterns has an attractive look. Thanks to digital printing technology, marble look slabs are so similar to natural stone. It can be used not only for tables and countertops but also for floor and wall coverings and even decorative elements such as flowerpots. Applying the marble effect takes away the dullness of space and gives it a special radiance.

Stone Look

For many years, stone has been one of the most popular materials used in the design and construction of buildings. Today, knowing that natural stone is not suitable for all applications and spaces, stone look slabs have been designed and produced using modern science and advanced technologies. Slabs meet all the requirements of contemporary design and architecture by preserving all the aesthetics and natural effects of stone, in terms of structure and texture.

Metal Look

The metal effect is very popular in design and architecture. These slabs with bronze, gray, and copper color tonnages make your environment genial. The designs in this collection, with their effect of metal oxide, evoke the aesthetics of industrial and old spaces in modern buildings. Due to the ability to combine freely and limitlessly with other designs, the metal effect is a great choice for interior design and even exterior spaces such as building facades.

Cement Look

Inspired by cement and concrete. Integrated design with neutral colors on the background allows you to create a space with a uniform harmony. Their matte surfaces make the cement series ideal for applying on building facades or other exterior claddings. You can have this effect in your home on the interior walls and living space, in bedrooms, and even in commercial spaces such as retail floors.
